#### **4.5.2** Summary

Linear SVC TVec performed very well in specificity and accuracy and F1 score was also acceptable:

Sensitivity | 0.659

Specificity | 0.948

Accuracy | 0.881

Precision | 0.796

Miscalculation Rate | 0.119

F1 Score | 0.721.

ADA Boost was the closest fit model in terms of accuracy scores with

Train Accuracy Score CVec ADA Boost | 0.85305

Test Accuracy Score CVec ADA Boost | 0.84379

and

Train Accuracy Score TVec ADA Boost | 0.87304

Test Accuracy Score TVec ADA Boost | 0.86535.

4.5.3 Therefore, our LSTM neural network will have to surpass these values and we will also perform sentiment analysis after labeling data from the non-Opinion section identified in these models to evaluate whether or not our models are efficient at identifying bias in abstracts and headlines. This begins the second portion of this project.
