/Users/ben/miniforge3/lib/python3.10/site-
packages/sklearn/model_selection/_validation.py:425: FitFailedWarning:
1200 fits failed out of a total of 2400.
The score on these train-test partitions for these parameters will be set to
nan.
If these failures are not expected, you can try to debug them by setting
error_score='raise'.
Below are more details about the failures:
1200 fits failed with the following error:

Sensitivity | 0.78

```
Specificity | 0.922
Accuracy | 0.889
Precision | 0.754
Miscalculation Rate | 0.111
```

At the moment we are optimizing specificity, i.e. minimizing false positives (incorrectly telling the viewer that the abstract/headline pair belongs to an Opinion section) and this comes at the expense of increasing false negatives.

Precision is improving but still not quite what it needs to be and thus we must continue along with other models in order to fine-tune to find the best classification model before we proceed to sentiment analysis of those articles within the Opinion section.

packages/sklearn/model\_selection/\_validation.py:425: FitFailedWarning: 1200 fits failed out of a total of 2400.

The score on these train-test partitions for these parameters will be set to nan.

If these failures are not expected, you can try to debug them by setting error\_score='raise'.

#### Below are more details about the failures:

\_\_\_\_\_\_

1200 fits failed with the following error:
